Executive Summary

Analysis of vashavali.vercel.app reveals substantial optimization opportunities across SEO, AEO, and GEO fundamentals. This analysis focuses on optimizing for AI-powered search engines like ChatGPT, Claude, Gemini, and Perplexity, which increasingly influence how users discover and consume content.

Overall Score

75 / 100

AEO Score

64 / 100

GEO Score

72 / 100

Technical SEO

100 / 100

Scoring Methodology

Scores are computed across three integrated systems: SEO (120-point scale, normalized to 100), AEO/GEO (100-point scale), and a Combined Unified Score. Each system evaluates technical implementation, content quality, structured data, AI-readiness, and more.

Quick Wins & High-Impact Actions

1. Expand Content Depth and Detail

MEDIUM

Increase content depth from ~373 words to 500+ words to provide more comprehensive information for AI systems to reference.

2. Add Content Freshness Indicators

LOW

Include last updated dates and timestamps to signal content freshness to both users and AI systems.

Technical SEO Analysis

Score: 100/100

What is Technical SEO?

Technical SEO covers the infrastructure and technical aspects of your website that affect search engine crawling, indexing, and ranking. This includes site speed, mobile-friendliness, security, structured data, and how easily search engines can access and understand your content.

Technical Inventory & Signals

HI Tag	• Present	Heading Levels Used	4 levels
Internal Links	8 links	Authority Links	0 links
Viewport Meta Tag	• Present	HTTPS Security	• Secure
XML Sitemaps	• 2 found	Robots.txt	• Present
Images Missing Alt	0 images	Structured Data Types	4 types

Mobile Optimization & Performance

Viewport Meta Tag	• Present	Touch Icons	• Present
HTTPS Security	• Secure	Lazy Loading	• Detected
Resource Hints	• Present	Image Alt Text	• All present

Technical Issues Found (1)

GOOD
Excellent image accessibility (100% alt text coverage) – helps AI systems understand visual content.

GOOD
Well-structured heading hierarchy – helps AI systems understand content organization and extract key information.

GOOD
HI tag present – provides clear page topic signal for AI content analysis.

GOOD
HTTPS implemented – secure connection builds trust with users and AI systems.

ISSUE
Page speed optimization – fast loading times improve user experience and AI crawler efficiency.

HOW TO FIX
Optimize images (compress, use WebP format), enable browser caching, minify CSS/JS, use CDN, implement lazy loading for images, and consider using a caching plugin or service.

Content Quality Analysis

Score: 59/100

What is Content SEO?
Content SEO focuses on the quality, relevance, and optimization of your website's content. This includes keyword optimization, content depth, heading structure, readability, internal linking, and how well your content answers user queries.

Content Structure & Readability

H1 Tag Present	• Present	Heading Levels Used	4 levels
Est. Content Length	~944 words	Est. Paragraphs	~12
Lists & Tables	• Present	Internal Links	8 links

Content Issues Found (4)

ISSUE
Thin content (373 words) – significantly expand content to provide sufficient context for AI understanding and citation.

HOW TO FIX
Review the specific issue mentioned above and implement best practices for this area. Consult official documentation and SEO guidelines for detailed implementation steps.

GOOD
Clear page topic defined with H1 – helps AI systems understand primary content focus.

ISSUE
Content readability – ensure content is well-structured with short paragraphs and clear language for AI processing.

HOW TO FIX
Review the specific issue mentioned above and implement best practices for this area. Consult official documentation and SEO guidelines for detailed implementation steps.

ISSUE

Keyword optimization – naturally incorporate relevant terms that AI systems would associate with your topic.

HOW TO FIX

Research and naturally integrate primary and secondary keywords. Use keywords in title, headings, first paragraph, and throughout content. Avoid keyword stuffing.

ISSUE

Content freshness – regularly update content and add timestamps to signal relevance to AI systems.

HOW TO FIX

Review the specific issue mentioned above and implement best practices for this area. Consult official documentation and SEO guidelines for detailed implementation steps.

Crawlability & Indexation

Score: 90/100

What is Crawlability?

Crawlability measures how easily search engines can discover, crawl, and index your pages. Key factors: robots.txt, XML sitemaps, canonical URLs, and clean URL structure that guides search engine bots efficiently.

Crawl & Index Signals

Robots.txt	• Present	XML Sitemap	• 2 found
Canonical URL	• Present	Clean URL Path	• Clean
URL Path Length	1 chars	Sitemaps Count	2

Crawlability Issues Found (3)

GOOD

Robots.txt file present – provides crawling guidelines for search engines and AI systems.

GOOD

XML sitemap available (2 found) – helps AI crawlers discover and index your content efficiently.

ISSUE

URL structure – ensure clean, descriptive URLs that AI systems can easily understand and reference.

HOW TO FIX

Review the specific issue mentioned above and implement best practices for this area. Consult official documentation and SEO guidelines for detailed implementation steps.

ISSUE

Internal linking – create logical link structure to help AI systems understand content relationships and importance.

HOW TO FIX

Review the specific issue mentioned above and implement best practices for this area. Consult official documentation and SEO guidelines for detailed implementation steps.

ISSUE

Mobile optimization – ensure responsive design for AI systems that prioritize mobile-friendly content.

HOW TO FIX

Add viewport meta tag: <meta name="viewport" content="width=device-width, initial-scale=1.0"> in the <head> section. This ensures your site displays correctly on mobile devices.

Trust & E-E-A-T Signals

Score: 70/100

What is E-E-A-T?

E-E-A-T (Experience, Expertise, Authoritativeness, Trustworthiness) are Google's quality signals for evaluating content credibility. Strong E-E-A-T includes author attribution, organization schema, content freshness, and external authority signals.

Trust & Authority Signals

Author Attribution	• Present	Organization Schema	• Present
Content Freshness	• Missing	About / Contact Page	• Present
Testimonials	• Detected	Social Media Signals	• Present
Authority Links	0 links	Structured Data	• 4 types

Trust Issues Found (3)

GOOD

Contact information present – builds trust signals that AI systems value for content credibility assessment.

ISSUE

Missing freshness signals – add last updated dates and timestamps to signal content currency to AI systems.

HOW TO FIX

Review the specific issue mentioned above and implement best practices for this area. Consult official documentation and SEO guidelines for detailed implementation steps.

GOOD

Author information present – builds expertise and authority signals for AI content quality assessment.

ISSUE

Privacy policy and terms – ensure legal pages are present and accessible to build trust with AI systems.

HOW TO FIX

Review the specific issue mentioned above and implement best practices for this area. Consult official documentation and SEO guidelines for detailed implementation steps.

ISSUE

Social proof – testimonials, reviews, and social media presence help establish credibility with AI systems.

HOW TO FIX

Review the specific issue mentioned above and implement best practices for this area. Consult official documentation and SEO guidelines for detailed implementation steps.

Answer Engine Optimization (AEO)

Score: 64/100 · Answerability: 62/100

What is AEO?

AEO optimizes your content to appear in answer engines — systems that provide direct answers in featured snippets, voice search results, and AI answer boxes. Key elements: FAQ sections, HowTo guides, direct answer snippets (40–60 words), question-based headings, QAPage schema.

AEO Content Signals

FAQ Content	• Present	HowTo Schema	• Missing
QAPage Schema	• Missing	Answerability Score	62/100
Direct Answer Optimized	• Needs work	Question Headings	6 found
Voice Search Ready	• No	List / Table Structure	• Missing

LLM Readiness Assessment

AI-Assessed AEO Score

AI AEO Score

64 / 100

AEO Issues Found (3)

GOOD

FAQ content detected – excellent for capturing direct answer opportunities in AI responses and voice search.

ISSUE

QAPage schema missing – add structured markup to Q&A content to improve AI comprehension and citation potential.

HOW TO FIX

Review the specific issue mentioned above and implement best practices for this area. Consult official documentation and SEO guidelines for detailed implementation steps.

ISSUE

HowTo schema opportunity – if you have instructional content, implement HowTo schema to capture procedural search queries.

HOW TO FIX

Add HowTo schema markup for step-by-step guides. Use clear numbered steps, include time estimates, and provide detailed instructions.

ISSUE

Content depth needs expansion (373 words) – aim for 500+ words to provide sufficient context for AI analysis and citation.

HOW TO FIX

Review the specific issue mentioned above and implement best practices for this area. Consult official documentation and SEO guidelines for detailed implementation steps.

GOOD

Author attribution present – builds trust and credibility signals that AI systems value for content quality assessment.

Suggested Direct Answer Snippet

Vashavali is an exclusive, ultra-secure digital platform designed to map ancestry and connect generations. It provides a completely isolated, invite-only sanctuary for families to preserve their legacy, free from public directories and data mining. Emphasizing absolute privacy and end-to-end encryption, Vashavali offers global portability and collaborative tools for a secure family narrative.

Generative Engine Optimization (GEO)

Score: 72/100 · AI GEO: 72/100

What is GEO?

GEO optimizes your content for AI-powered search engines like ChatGPT, Claude, Gemini, and Perplexity. Key factors: llms.txt file for AI guidance, structured data (JSON-LD), author attribution, citation readiness, semantic HTML, content freshness, and making your content easily citable by AI systems.

GEO Score

72 / 100

AI GEO Score

Author Signals

100 / 100

AI Optimization Signals

Entity Recognition	• Present	Citation Readiness	• Needs improvement
AI.txt / LLMs.txt	• Present	Brand Mentions	• Missing
Semantic HTML	• Missing	ARIA Labels	• Missing
Images Missing Alt	0 images	Structured Data Types	4 types

GEO Visibility & Featured Snippet Signals

Question Headings	• Present	List Content (UL/OL)	• Missing
Table Content	• Missing	Zero-Click Optimization	• Optimized
Conversational Headings	• Missing	Local Content Signals	• Missing
Entity Markup	• Present	Authority Links	0 links

GEO Highlights

- GOOD**
Organization entity graph detected - helps AI systems understand your brand relationships and authority.
- GOOD**
Canonical URL present - helps consolidate link signals and prevents content duplication issues for AI crawlers.
- GOOD**
Al.txt file detected - provides clear guidelines for AI crawlers and demonstrates AI-awareness.
- GOOD**
Good internal linking structure (10 links) - helps AI systems understand content relationships and site architecture.
- GOOD**
Rich structured data implementation (4 types) - excellent for AI content understanding and entity recognition.

Structured Data Issues (2)

- GOOD**
Structured data implemented: SoftwareApplication, WebSite, Organization, FAQPage - excellent for AI entity recognition.
- GOOD**
Organization schema present - helps AI systems understand your business entity and authority.
- ISSUE**
Consider Article schema - implement for blog posts and articles to improve AI content categorization.
- HOW TO FIX**
Implement JSON-LD structured data for Organization, Person, Article, and other relevant types. Use Schema.org vocabulary. Validate with Google's Rich Results Test.

ISSUE

Schema validation – ensure all structured data is properly formatted and error-free for optimal AI parsing.

HOW TO FIX

Implement JSON-LD structured data for Organization, Person, Article, and other relevant types. Use Schema.org vocabulary. Validate with Google's Rich Results Test.

AI-Powered Recommendations

1. Enhance FAQ Content and Schema Depth

HIGH

While a `FAQPage` schema is present, fully fleshing out the FAQ section with clear, concise question-answer pairs directly addresses common user queries. Optimizing these answers for brevity and clarity will significantly improve the site's chances of appearing in featured snippets and direct answers in search engines and AI systems. Ensure the content within the FAQ directly maps to the `Question` and `Answer` properties in the schema.

Category: Content Optimization & Structured Data · Effort: 3/5

2. Develop a Comprehensive 'About Us' Page

HIGH

For AI systems to cite Vashavali confidently, they need to establish brand authority and trustworthiness. A detailed 'About Us' page outlining the company's vision, history, founding team (if applicable), values, and mission beyond the homepage summary will provide critical contextual information. This enhances the site's 'E-E-A-T' (Experience, Expertise, Authoritativeness, Trustworthiness) signals for LLMs and search engines.

Category: Trust & Authority · Effort: 4/5

3. Optimize Key Features and Benefits for Direct Answers

HIGH

Currently, features like 'Absolute Privacy', 'Global Portability', 'Collaborative', 'Zero Data Mining', 'Isolated Environments', and 'End-to-End Encryption' are listed under H4s. Reformat these sections to explicitly answer questions such as 'What are Vashavali's key features?' or 'How does Vashavali ensure privacy?' with a concise, single-paragraph summary followed by further details. This direct Q&A format is ideal for AEO and voice search.

Category: Content Optimization · Effort: 2/5

4. Implement Review Schema for Testimonials

MEDIUM

The 'What Our Families Say' section contains valuable social proof. Implementing `Review` or `AggregateRating` schema for these testimonials (e.g., for 'Sarah Jenkins', 'Michael Chen', 'Priya Sharma') will allow AI systems and search engines to better understand and display these trust signals. This directly enhances the site's GEO by providing structured data about user satisfaction.

Category: Structured Data · Effort: 3/5

5. Expand Organization and SoftwareApplication Schema Details

MEDIUM

While `SoftwareApplication`, `WebSite`, and `Organization` schemas are used, consider adding more specific properties. For `Organization`, include `logo`, `contactPoint`, `sameAs` (social media links), and potentially `foundingDate`. For `SoftwareApplication`, properties like `applicationCategory`, `operatingSystem`, `featureList`, and `offers` (if there's a pricing model) would provide richer data for AI models to understand and categorize the platform more accurately.

Category: Structured Data · Effort: 3/5
